A dot plot comparing model performance across four metrics (AUC ROC, Accuracy, Sensitivity, Specificity) for different models and covariate sets. The y-axis lists "Model, covariate set" with the following categories from top to bottom:

- XGBoost, No county, no contributing cause
- XGBoost, No county
- XGBoost, No contributing causes
- XGBoost, All covariates
- LightGBM, No county, no contributing cause
- LightGBM, No county
- LightGBM, No contributing causes
- LightGBM, All covariates
- Random Forest, No county, no contributing cause
- Random Forest, No county
- Random Forest, No contributing causes
- Random Forest, All covariates
- Logistic (ElasticNet), No county, no contributing cause
- Logistic (ElasticNet), No county
- Logistic (ElasticNet), No contributing causes
- Logistic (ElasticNet), All covariates

The x-axis is labeled "Percent of maximum possible value (%)".
